					SAFETY CATEGORY A
DEPT. TECH.SUPP	DATE 20.6.94	COMPILED BY A J Shiner	CHECKED <i>ASS</i>	APPROVED <i>ASS</i>	ISSUE B

1. Introduction

1.1 It has been found under conditions of extreme dampness that the locking beak assembly may corrode causing the beak to stick. This possibility applies to beaks manufactured with unplated pivots up to production beginning week 1193. Subsequent to that date, the pivots are zinc plated.

1.2 A list of the lift numbers with the potential problem is attached.

2.0 Inspection and Corrective Actions.

2.1 Condition of beaks to be inspected to ensure free dropping under gravity at every planned maintenance of the landing doors.

2.2. Any beak which will not drop under gravity must be replaced. The cause of damage must be identified.

2.3 Locking beak assemblies which are damaged due to corrosion of the the beak shaft will be replaced free of charge from Central Stores, Hounslow upon identification of the site, the Kone Lift Number and return of faulty beak assemblies.

2.4 Failure to return the faulty material or identify the site will result in the normal spares change for the component being invoiced to the receiver of the goods.

3.0 Replacement Parts.

3.1 Beak assemblies are left and right handed, parts identification are shown on the attached extracts from the spares manual AR 3.14.11 pages 6 and 7.

4.0 Warranty

4.1 This is a problem which has previously been highlighted through the warranty system and the factory have now notified us of the long term solution. This work is not claimable under warranty.

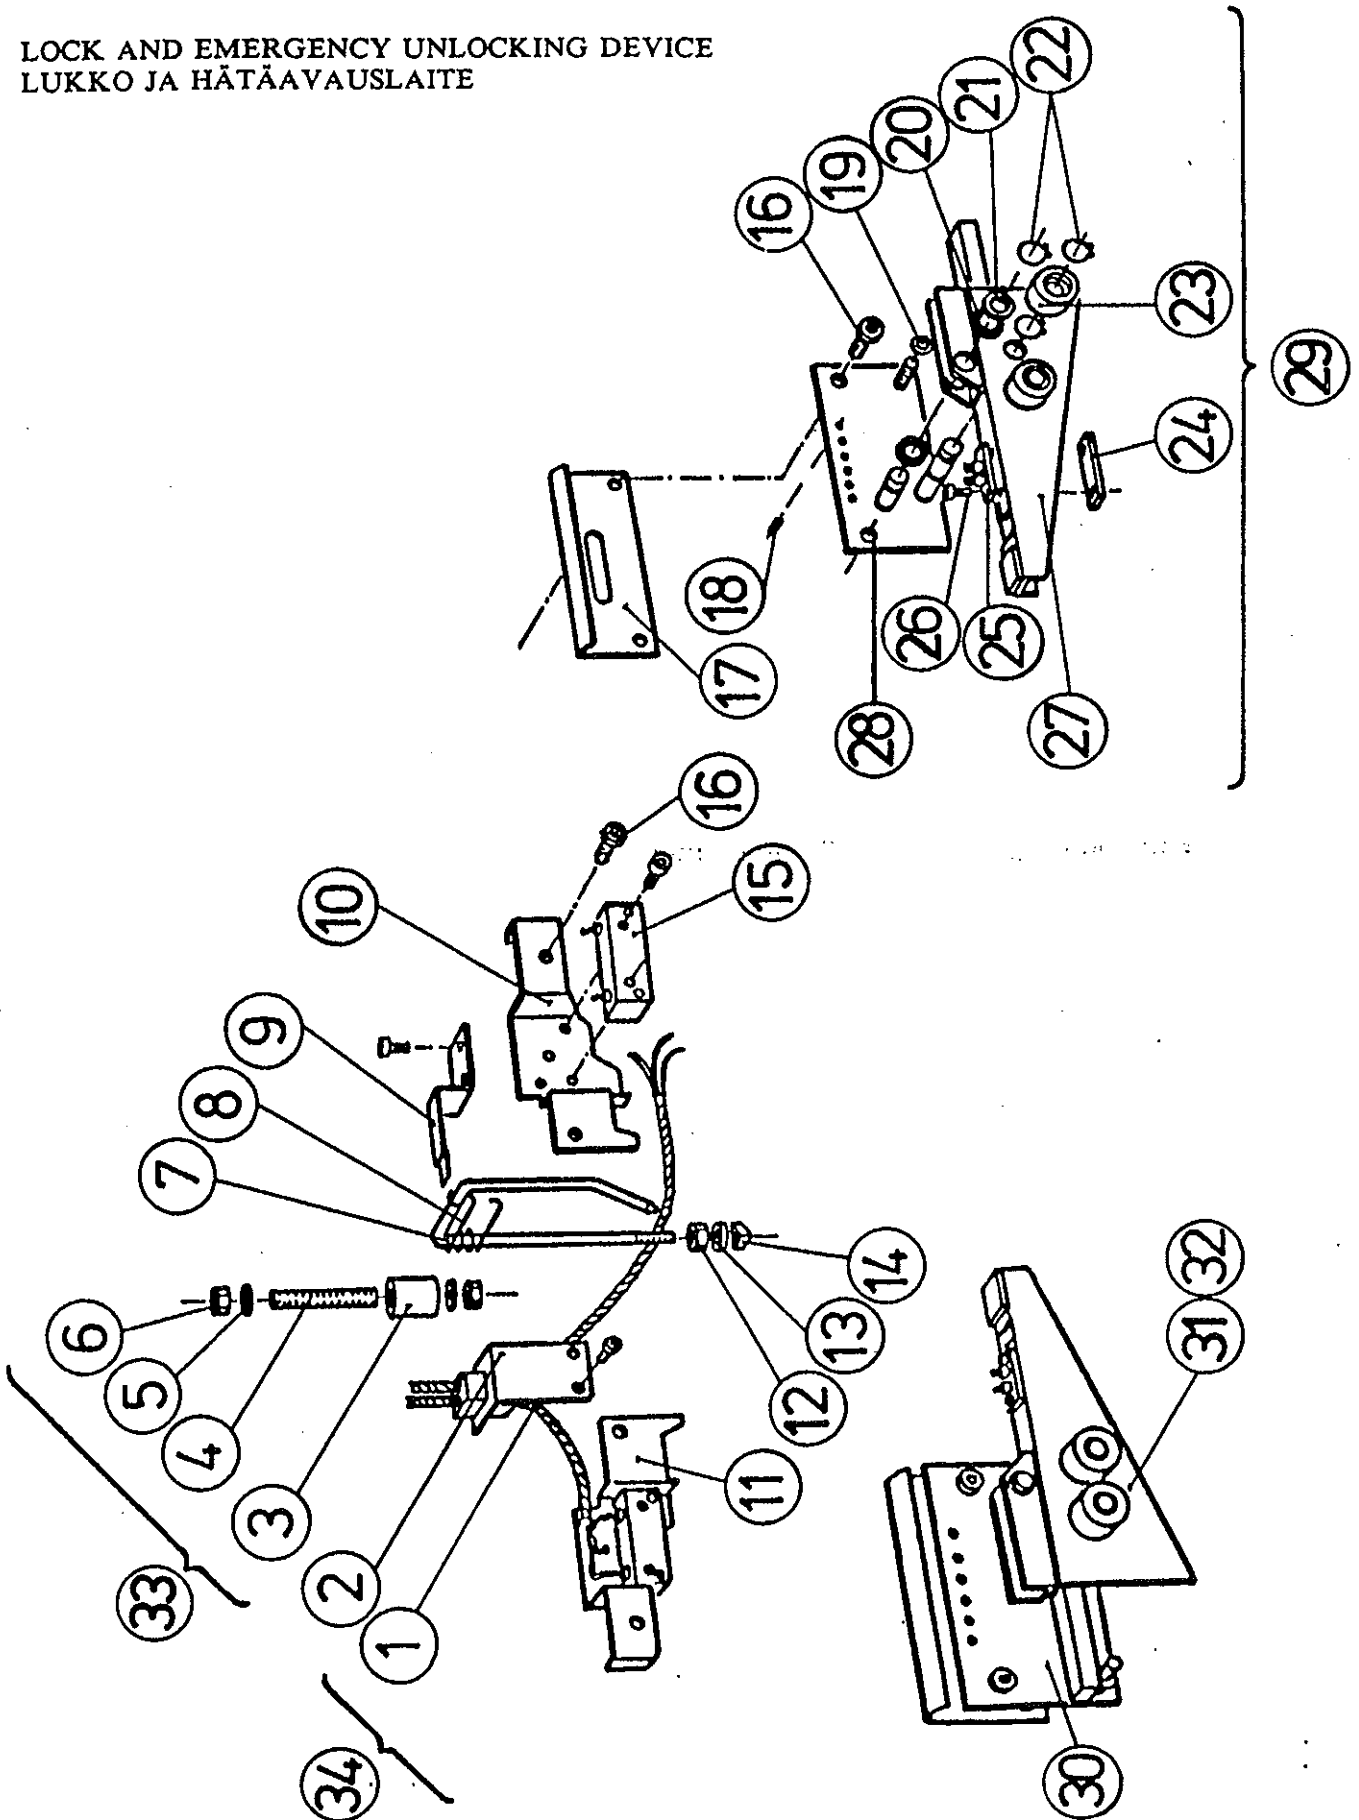

NOTE With Issue A, dated 16.2.94. the wrong list of addresses was sent out in error. The correct list is now attached.
